Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 25-34, drawn to an apparatus, classified in class 16, subclass 436.
- II. Claims 35-44 drawn to a method of making, classified in class 29, subclass 527.2.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case there is more than one method for making an element having high mechanical strength and high vibration absorption. For instance, preformed aluminum alloy can be used in lieu of fiber-reinforced resin. The mechanical characteristics of aluminum alloys can provide adequate strength as well as vibration absorption.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Herbert Dubno on 9/21/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
